

More than 32 years of experience
C9 M designed to significantly reduce the lifting time of wires and low height
above ground

Main Advantages

- Designed not to create damage during contact with mechanical machinery (harvesting machine-pruner-soil cultivation)
- Cross section 42 x 32 mm – 1.26 " (1.66 x 1.26 " - 1.02 ")
- Optimal compromise between flexibility and high mechanical strength
- Strong ability to install in difficult ground - Crimped edge on the bottom of the stake
- Special shape of the hooks to avoid closure during mechanical works
- 32 mm (1.26 ") flat side section for good stability
- Double hook for the wires during the soil cultivation

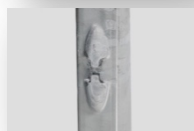

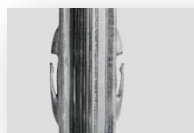

Galvanization

C9 M	Strip Galva Z 275 gr/m ² 18-25μ per side En 10 142 Steel DX51-S250 GD			Cor-ten B type Steel S300JOWP			Hot dip galvanization En 1461 60-80μ per side Steel S235 JR En 10 025/En 10 147

Weighting per mtr	1,20	1,44	-	-	1,44	-	1,32	1,58	-

Type of hooks

- Type A**
Hooks designed to significantly reduce the arduousness of the work and its cost
Adapted to current and future mechanical works (such a mechanical lifting)
- Type H**
Double hook for the wires during the soil cultivation

Installation advice

- Cap and mini piston on request
- Plant the post during the wet season
- Drive 25-30 % of the post length into the ground
- Deep rip soils during site preparation
- Drill a pilot hole in difficult ground
- Adaptation of the inter-distance between the posts in particular (windy area-high production in hectoliter-high degree of mechanization)
